Cloud Platform Engineer

Professional Summary

Detail-oriented Cloud Platform Engineer with practical experience in AWS automation, Docker containerization, Linux server management, and CI/CD pipeline support. Skilled in developing deployment automation using Python and GitHub Actions to enhance cloud infrastructure efficiency and reliability.

Core Competencies

- Cloud Platforms & Infrastructure: AWS, Linux Server Management
- Containerization & Orchestration: Docker
- Automation & CI/CD: Python scripting, GitHub Actions
- Version Control: Git

Professional Experience

Cloud Engineering Intern

- Maintained Linux server environments and supported CI/CD workflows to improve deployment efficiency and stability.
- Assisted in Docker-based application deployments, ensuring container consistency across environments.
- Developed and maintained AWS automation scripts to streamline cloud operations.

Projects

Deployment Automation

- Developed deployment automation scripts leveraging Python, Docker, and GitHub Actions, accelerating application delivery and reducing manual deployment errors.
- Integrated containerization with CI/CD pipelines to improve deployment consistency and operational efficiency.
