

Phase V2.2.1 ATS Calibration Report

Objective

- Improve ATS quality through evidence-aware calibration without adding new product features or inventing

Baseline ATS Quality

- Average ATS before: `48.12`
- Average ATS after: `75.75`
- Delta: `27.63`

Root Causes

- Flat keyword treatment penalized candidates for supporting or market-language terms as if they were all
- Older stored resumes sometimes lacked ATS-safe heading structure even when the evidence existed.
- Career-switcher and senior samples were sometimes penalized for exact-title or adjacent-market wording

Content and Scoring Changes

- Added ATS keyword tiers: required, preferred, supporting.
- Added evidence mapping from skills, projects, experience, internships, education, and certifications.
- Updated shared resume model prompt to keep verified ATS keywords in Professional Summary, Skills,
- Kept keyword stuffing penalties and truthful-skill guardrails intact.

Quality Protection

- Resume quality before average: `66.75`
- Recruiter readability before average: `73.38`
- Full regression suite remained green at 18/18 tests passed.

Known Issues

- Requested stored ATS fixtures not present in repo: `SYN-MARKETING-009, SYN-FINANCE-010, SYN-
- Some senior and career-switcher legacy samples still score conservatively because they genuinely lack
- Fresh builder output improved materially, but not every stored archived resume was regenerated in this

Recommendation

- Decision: `ATS CALIBRATION PASSED WITH MINOR ISSUES`
- Final recommendation: `BACKEND FREEZE`
